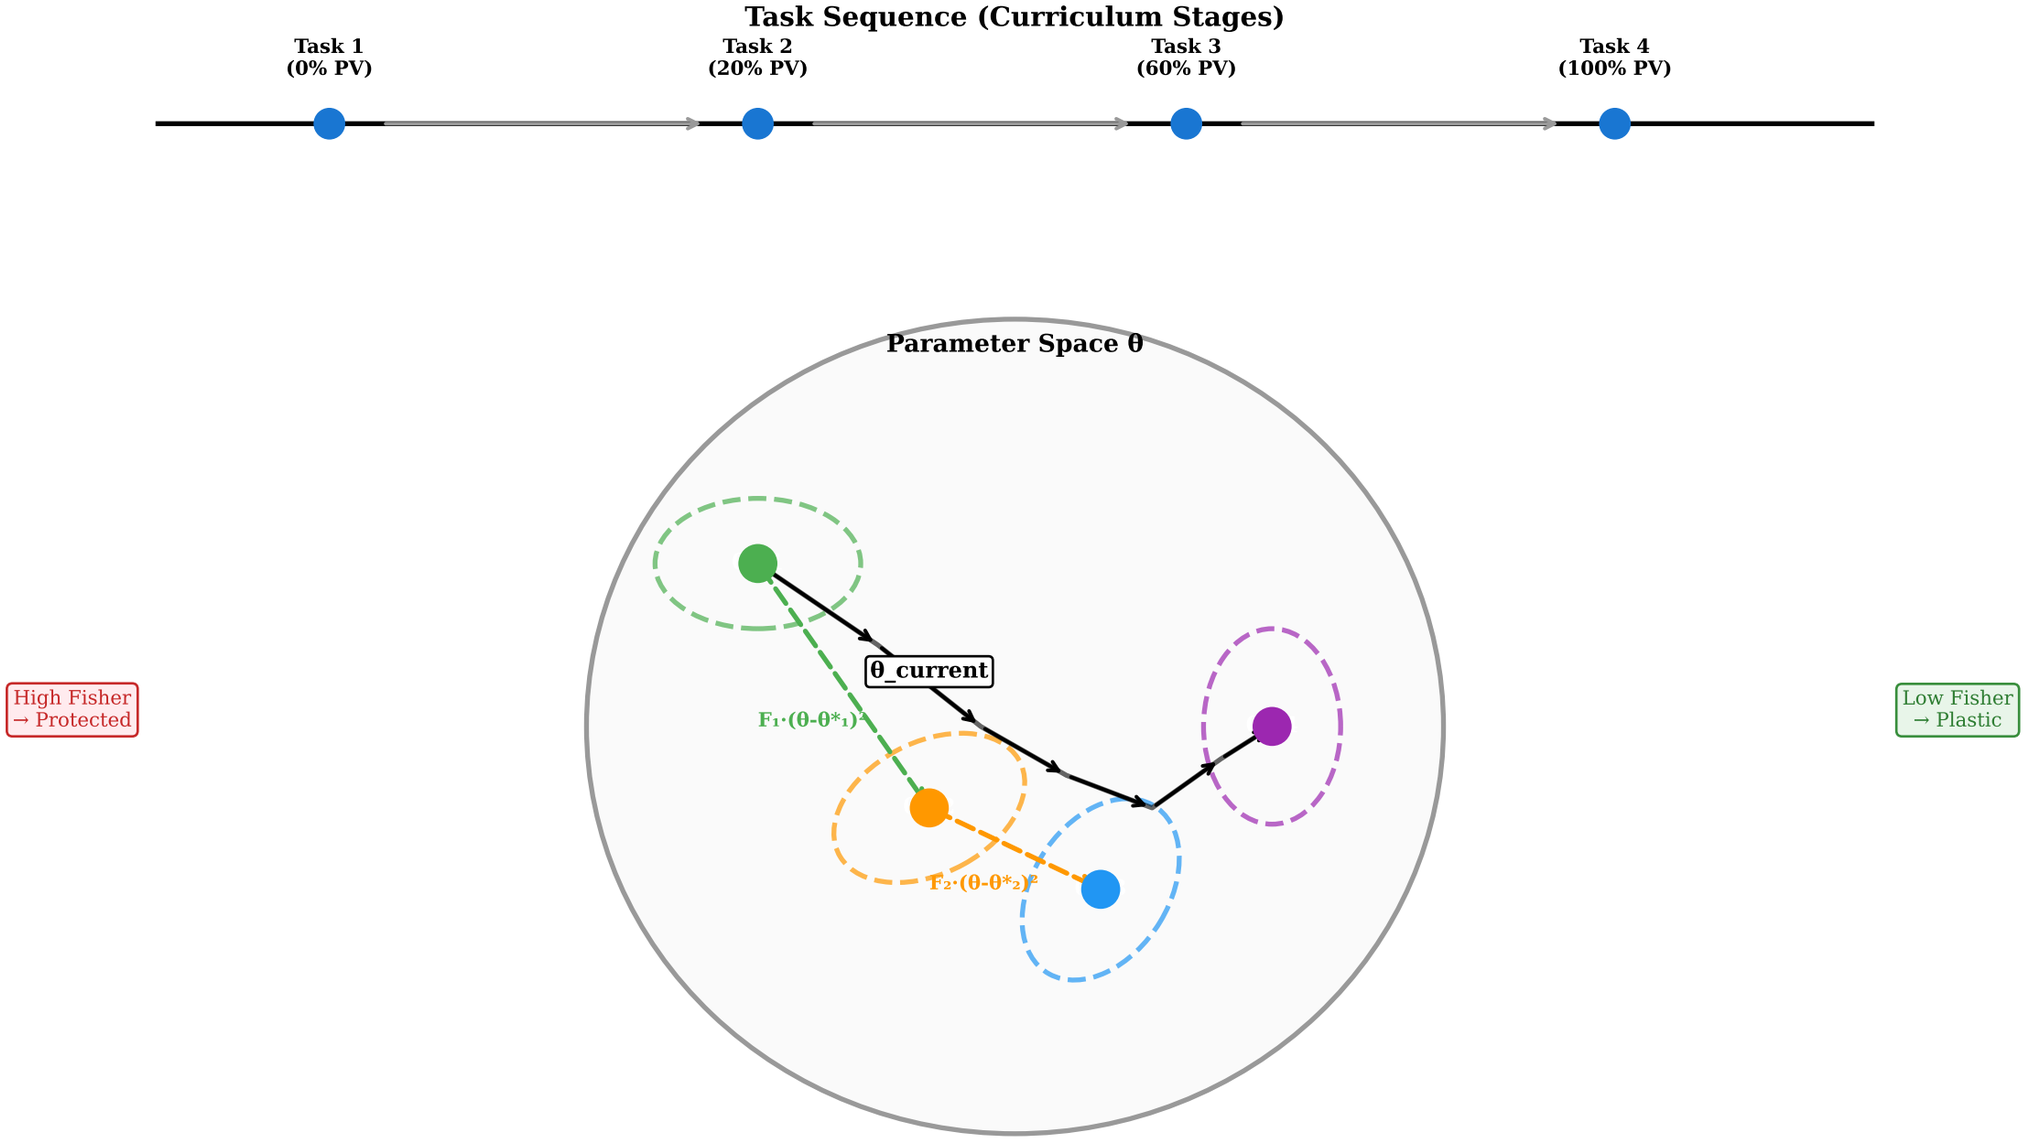
Figure 29: Elastic Weight Consolidation (EWC) for Continual Adaptation



$$L_{EWC}(\theta) = L_{new}(\theta) + (\lambda/2) \Sigma_{task} \Sigma_i F_{task,i} \cdot (\theta_i - \theta^*_{task,i})^2$$

$F_i = E[(\partial \log \pi(a|o)/\partial \theta_i)^2]$ (Fisher Information diagonal)
